TRU-SEAL

MICROFILTER BAG - 8 GAL

MD's Tru-Seal Microfiltration System is the new standard in all top-emptying central vacuum power units. The Tru-Seal Microfiltration System features three connection points which allows debris intake from the front utility valve and both side intakes. The new bag is easy to install and change, while its encapsulating design and locking caps make disposal very sanitary.

The highly durable, Tru-Seal disposable filtration bag is a 5-ply microfilter that captures debris down to .3 microns. At 8-gallons, Tru-Seal has the largest trash capacity of any disposable residential central vacuum bag on the market.

All 14" wide units, no matter the height, will have the new Tru-Seal Support Bag and new Tru-Seal Microfilter Bag. No more having to stock two different bag sizes. A Tru-Seal Upgrade Kit is also available to retrofit any older units to the new filtration system.

Intake connection & new bag adapter.

Locking intake seals on the utility valve.

Dust caps on all three connections.

Features

- Simultaneous connection to utility valve and both intakes
- 5-Layer, disposable, Tru-Seal Microfilter Bag
- Unique clamping seal for utility valve
- Dust retention caps on all three connections
- Stronger, higher capacity Tru-Seal Support Bag
- Reengineered bag adapter

Benefits

- Ability to use utility valve with a closed bag
- Easier and cleaner bag replacement
- Increased actual trash capacity
- Seamless integration with Tru-Seal Snap-in Bag Adapter
