

## >Why a Central Vacuum?

We've all experienced it - hauling a vacuum cleaner around the house, kicking a canister vacuum across the room, and walking all the way back to untangle a cord. But even worse, finding ourselves back at the stores every couple years to purchase yet another vacuum.

Installing a central vacuum system is the answer to all these age-old complexities. And if you are like most homeowners in the USA,

you're probably not too familiar with central vacuum systems. Here are five reasons to consider installing a central vacuum system in your home.

### #1 - Minimal Vacuum Noise

Most of us are accustomed to the noisy racket vacuum cleaners make, but with central vacuums, the source of the noise, the motor, is located in the basement or garage. This means vacuuming can finally coexist with life and may even improve it.

### #2 - Super Easy to Use

Simply take the lightweight hose and clean anywhere you need. Attach any number of accessories and clean any surface (even pets) with ease. Parts of the home that are hard to clean will never have to accumulate dust again. Get in the tight spaces, brush across window shades, reach high to ledges and fans without standing on chairs or ladders.

### #3 - Powerful, Deep Cleaning

The powerful motors in central vacuum systems last longer, remain cooler, and can be up to 5x stronger than standard upright vacuum motors. A more powerful motor means more suction, which means truly clean carpets.

### #4 - Goodbye Portable Vacuums

Say goodbye to replacing portable vacuums every few years, the constant noise, replacement belts, and that awful 'vacuum' smell. Say hello to longevity, power, quiet and clean.

### #5 - Allergy Relief & Cleaner Air

According to a UC Davis clinical study, allergy symptoms are proven to be reduced in homes cleaned with a central vacuum. Since the vacuum exhaust is not located in the house, it pulls all the dust and dirt out and away from the home creating fresher, cleaner air.

CENTRAL VACUUMS

## The Industry Leader in Integrated Cleaning Systems

Smart Solutions, Inc.  
High Performance Building Products

208-798-4449

Why not integrate your vacuum along with all your other major appliances? A built-in central vacuum eliminates the noise, smell, and inconvenience of portables. It can be used to clean any surface, any spill, anywhere using its powerful remote motors. Plus, central vacuums are proven to reduce allergies and 99% of everyone who installs one, says they will never use any other kind of vacuum. And with MD Central Vacuum you can trust 50 years of made-in-the USA durability along with professional independent dealers.

### > Reliable Power in Every Model

### > Home Buyers Want Central Vac

**According to the 2013 National Association of Home Buyers survey, 1/3 of home buyers stated they prefer a central vacuum, and 1-out-of-3 homes over 3,000 square feet have a central vacuum system installed. That means the concept is catching on! Healthy and convenient cleaning is in demand and here to stay - and it's more affordable than ever.**

- 99% State Their Home is Cleaner
- Clinical Study Confirms Reduction of Allergies
- EPA States IAQ is Improved
- Increases Home Value
- Qualifies for LEED® Points

### > Installation... Simple with Local Dealers!

**An MD central vacuum system is easily pre-plumbed into new construction homea, and nearly all existing homes can have one installed without opening walls. A typical installation in a 3000 square foot home has 4-5 wall ports. Choose between traditional hose connection inlets or Hide-A-Hose retractable inlets. The most popular vacuum hoses range from 30 to 50 feet. Complete installation can take less than a day by the homeowner, or by a professional installer.**

#### Installation Steps:

1. Determine central locations for vacuum ports. Typically one or two ports are near the bedroom side of the home, and one or two are located in the kitchen living area. The ports are small and put in inconspicuous locations.
2. Install the ports and run PVC to a trunk line that ends at the vacuum unit in the garage, basement or utility room.
3. Hang the central vacuum unit, and clean up. That's it!

**How much does all this cost?** Normal installations including accessories cost as much as a very high end portable vacuum. Call your local MD dealer for a free quote!
